I am developing a web applications in HTML and CSS. I can create simple and effective animations in CSS. In JavaScript, I can get data from HTML, create functions, work with arrays and make animations both using libraries and without them. I work with a MySQL database: creating a database and tables, adding, deleting and updating table entries, as well as sorting tables using MySQL queries in the PHP programming languages. There are two projects on Angular.

In addition, I own Webpack, React, Node.js, Docker, Redux and Git. In addition, I own Webpack, React, Node.js, Docker, Redux and Git. I use MJML for the layout of the email newsletter. Writing HTML code according to the BEM methodology, layout of adaptive and cross-browser web applications.
